Artificial Intelligence

Artificial Intelligence (AI) is a branch of computer science that develops systems capable of performing tasks that normally require human intelligence.

Machine learning is a subset of AI. It enables computers to learn patterns from data and improve their performance without being explicitly programmed for every task.

Deep learning is a subset of machine learning that uses neural networks with multiple layers. It is commonly used in image recognition, speech processing, and natural language processing.

Common applications of AI include recommendation systems, virtual assistants, fraud detection, medical image analysis, and autonomous vehicles.
